GEO Action Report – Verde Solar (Demo)

Sep 26, 2026 · @rui

Summary

Verde Solar appears in 11 of 40 buyer questions asked to AI engines, with a GEO score of 42/100 and 18% share of voice. Competitor SolarNorte leads with 34%. This report turns the September scan into 8 tasks for the marketing team, ranked by expected impact.

Demo report. Client, competitors and all figures are sample data.

The scan found three main problems:

1. **AI states wrong facts about the client.** Three engines give the wrong service area, founding year or warranty. This costs leads outside Granada.
2. **The client is missing from the sources AI trusts.** The most-cited sites in this niche are Reddit, OCU and "best installer" list articles. The client is not on any of them.
3. **The client has no content for high-value questions.** For cost and subsidy questions, AI quotes government and consumer sites instead of an installer.

How to use this report

Each task has an owner. Work on the high-priority tasks first. Every task is written in the same format:

- **What:** the task in one line
- **Why:** the finding in the scan that the task fixes
- **How:** the steps to follow
- **Done when:** how to confirm the task is finished

Owner	Covers
Content	Articles, guides, FAQ pages on the client's site
PR	Media, list articles, directories, review sites
Web	Site updates, structured data, technical fixes
Social	LinkedIn, Reddit, forums, community answers
Brand	Company description and messaging

Mark each task *In progress* or *Done* in the GEO Monitor dashboard. The next monthly scan checks whether each fix changed what AI says about the client.

High-priority tasks

1. Fix the three incorrect facts at their source

Owner: Web + Social · **Effort:** about 2 hours · **Status:** In progress

What: Correct the wrong information that AI engines repeat about the client.

Why: ChatGPT and Gemini say the client works only in Granada city. It actually covers all of Andalucía. Buyers in Málaga or Sevilla are told the client doesn't serve them. AI engines don't make these facts up. They copy them from old pages online, so the fix has to happen on those pages.

Wrong fact	Correct fact	Where it comes from
Works only in Granada city	Covers all of Andalucía	Old Páginas Amarillas listing (2021)
Founded in 2019	Founded in 2014	LinkedIn company page
10-year installation warranty	[CLIENT TO CONFIRM]	Outdated FAQ page on the client's site

How:

1. Update or delete the Páginas Amarillas listing. Set the service area to Andalucía.
2. Correct the founding year on the LinkedIn company page.
3. Confirm the warranty with the client, then update the FAQ page. Add a "last updated" date to the page.
4. Search Google for the client's name plus "Granada" and "2019" to find other old copies. Fix any you find.

Done when: All three sources show the correct facts. Expect AI answers to change within 1–3 months, starting with Perplexity.

2. Get the client into "best installers in Andalucía" lists

Owner: PR · **Effort:** 2–3 weeks · **Status:** To do

What: Get the client mentioned in the list articles that AI engines quote for "best installer" questions.

Why: SolarNorte wins most "best installer" answers because it appears in three list articles that AI engines cite often. When AI is asked for a recommendation, it summarises these lists. A company that isn't on them is rarely recommended.

How:

1. Take the three list articles named in the dashboard's Sources section.
2. Find each author or editor and contact them.
3. Offer something useful for the article, such as a customer case with real numbers, installation photos or a comment from the founder.
4. Ask to be added the next time the list is updated.
5. Also search for newer lists from 2025–2026 and pitch those authors.

Done when: The client appears in at least 2 list articles that AI engines cite.

3. Publish a 2026 cost guide with real price ranges

Owner: Content · **Effort:** 1 week · **Status:** To do

What: Write a page on the client's site that answers "How much do solar panels cost for a house in Andalucía?"

Why: Cost questions are among the most common questions buyers ask. The client is absent from 4 of 5 engines for them, and AI quotes the government agency IDAE instead. A clear, dated page with real prices is the kind of content AI likes to quote.

How:

1. Start the page with a direct 2–3 sentence answer, including a price range.
2. Add a table of typical prices by home size, such as 3 kW, 5 kW and 8 kW systems, with and without a battery.
3. Explain what changes the price: roof type, battery, subsidies.
4. Use real figures from the client's recent projects. Don't use estimates you can't back up.
5. Add a visible "Updated September 2026" date and FAQ questions at the bottom.

Done when: The page is live and the Web team has added FAQ structured data (see task 7).

4. Answer solar questions on Reddit and consumer forums

Owner: Social · **Effort:** ongoing, about 1 hour a week · **Status:** To do

What: Build a helpful, visible presence in the communities AI engines read.

Why: Reddit is the most-cited source in this niche (cited 14 times across the 40 questions). AI engines treat real user discussions as honest opinions. At the moment, the client isn't part of those discussions.

How:

1. Create or use a personal account for the founder or a technical expert, with the company named in the profile.
2. Each week, find 2 questions about solar in Spain on r/spain, r/SpainFIRE or local forums.
3. Give real, useful answers. Mention the company only when it's relevant.
4. Never post fake reviews or ask staff to pose as customers. Communities spot this, and it damages trust.

Done when: This is ongoing. Aim for 8 good answers a month.

Medium-priority tasks

5. Create a subsidy explainer page for Andalucía

Owner: Content · **Effort:** 3 days · **Status:** To do

What: Write a page answering "Which solar subsidies are available in Andalucía in 2026?"

Why: Many buyers ask this. AI names the client for it now and then, but usually quotes the Junta de Andalucía instead. A clear local explainer written by an installer can be quoted next to the official source.

How:

1. Write the page as an FAQ: who qualifies, how much you can get, how to apply, how long it takes.
2. Link to the official government pages for every figure.
3. Add a short section on how the client helps with the paperwork.
4. Review and date the page every quarter, because subsidy rules change.

Done when: The page is live, links to official sources and shows a review date.

6. Use one brand description everywhere

Owner: Brand · **Effort:** 1 day · **Status:** Done

What: Write one short standard description of the company and use it on every profile.

Why: AI engines described the client in 4 different ways. When sources disagree, AI either picks one at random or leaves the company out. One consistent description gives AI a single clear fact to repeat.

How:

1. Write a 50-word paragraph covering who the company is, what it does, where it works, who it serves and since when.
2. Paste the exact same text into the website About page, LinkedIn, Google Business Profile and every directory listing.
3. Save it in a shared brand document so everyone uses it.

Done when: The same description appears on every profile. This task is already done.

7. Add structured data to the website

Owner: Web · **Effort:** 4 hours · **Status:** Done

What: Add schema markup (Organization, LocalBusiness and FAQPage) to the website code.

Why: Structured data tells AI engines, in a machine-readable format, who the company is, where it works and which profiles belong to it. It helps them connect the brand to its service area.

How:

1. The web developer adds Organization and LocalBusiness schema to the homepage, with address, service area and phone.
2. Add `sameAs` links to LinkedIn, Google Business Profile and directory listings.
3. Add FAQPage schema to the FAQ, cost guide and subsidy pages.
4. Check it with Google's Rich Results Test.

Done when: The Rich Results Test shows no errors. This task is already done, and it needs extending when the new pages go live.

8. Get listed on OCU and two review sites

Owner: PR · **Effort:** 1 week · **Status:** To do

What: Create profiles on the consumer and review sites AI trusts, and collect real customer reviews.

Why: OCU (ocu.org) is cited 11 times in this niche and the client isn't listed. Reviews on independent sites give AI outside proof when it answers "Is this company good?"

How:

1. Check whether OCU has a partner or recommended installer programme and apply.
2. Create or complete profiles on two review sites buyers in Spain use, such as Habitissimo, Trustpilot or Google.
3. Ask 10 recent, satisfied customers to leave an honest review. Make it easy by sending a direct link.
4. Reply politely to every review, including negative ones.

Done when: The client is listed on OCU (if eligible) and two review sites, with at least 10 new reviews.

90-day timeline

Fix the facts first, then build content, then keep building outside mentions. Outside mentions take longest to show up in AI answers.

Period	Tasks	Expected result in the scan
Days 1–30	1 Fix facts · 3 Cost guide · start 4 Reddit · start 2 List outreach	Wrong facts start to disappear on Perplexity
Days 31–60	5 Subsidy page · 8 Review sites · extend 7 Structured data to new pages · continue 2 and 4	Client cited for cost questions; share of voice rising
Days 61–90	Update pages with new data · continue 2 and 4 · new tasks from the next scan	Client appears in list articles; recommended for "best installer" questions

Measuring progress

The next scan runs on 26 October 2026 using the same 40 questions, so the results can be compared directly with September.

Measure	September	90-day target
GEO score	42 / 100	55+
AI share of voice	18%	25%
Questions where client appears	11 / 40	18 / 40
Incorrect facts	3	0

Before each scan, the marketing team sends back:

- The status of each task in the dashboard
- Links to new pages, articles, listings and forum answers
- Any new facts about the client, such as new services, areas or prices

AI answers change with question wording and over time. Judge progress by the trend across several months, not by a single result.
